

# MISCONCEPTIONS ABOUT GLOBAL WARMING

Presented by Robert Haw, Ph.D.

**Thursday, September 14**  
**7 – 8:30 p.m.**

**Pasadena Central Library**  
Donald Wright Auditorium  
285 E. Walnut St. • Pasadena

**The climate crisis is a subtle, long-term problem** because it doesn't manifest itself like weather, which changes a lot from day-to-day. Yet climate change is not only closer than you think, it's also more affordable to solve than you might believe – but only if we act soon.

Presenter Robert Haw will explain where global warming is coming from, how we know it's real, and more importantly – how we can end it within our lifetimes. He will highlight actions that can be taken at the personal level, as well as legislative solutions in the works at local, state and federal governments that can, with your support and encouragement, become enacted faster.

A physicist by training and a graduate of Stanford University, Haw has been employed at NASA's Jet Propulsion Laboratory for 25 years as an interplanetary navigation engineer on exploration missions across the solar system. In 2012, Haw co-founded the Pasadena Foothills chapter of the Citizens Climate Lobby, an organization devoted to building the political will for a livable planet. He has frequently spoken to elected representatives as well to public audiences in the Foothill communities about a practical and bi-partisan solution to the climate crisis.
